The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.

10/825,801

Applicant(s)

ISELER ET AL.

Examiner

Matthew J. Song

Art Unit

1792

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 26 October 2007.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 11-15 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 11-13 is/are rejected.
- 7) ☒ Claim(s) 14-15 is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/ are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO/SB/08)
Paper No(s)/Mail Date _____
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: _____

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 10/26/2007 has been entered.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

3. Claims 11-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tomzig et al (US 6,001,170) in view of Linares (US 3,899,304).

In an apparatus for crystal growth, note entire reference, Tomzig et al teaches a melt is held in a crucible comprising a graphite crucible (col 1, ln 10-30); a seed crystal is immersed in the melt and drawn away (col 1, ln 10-30), this clearly suggests a means for installing a seed crystal and charge in the vessel; a heater means 4 to heat the charge (col 5, ln 60 to col 6, ln 15); and a magnetic system comprising an induction coil mounted around the vessel (col 3, ln 45-65; col 6, ln 1-45). Tomzig et al also teaches the magnetic system is connected to an AC/DC converting unit and fed via a power supply (col 6, ln 1-40), this clearly suggests applicant's means for applying a voltage to impose magnetic field lines.

Tomzig et al does not teach an inner elongated electrode and an outer electrode of graphite and a means for applying a voltage across the electrodes.

In an apparatus for crystal growth, note entire reference, Linares teaches an electrode 20 may be inserted into a melt and is electrically connected as an anode (col 4, ln 15-40), this clearly suggests applicant's small elongated electrode material which extends into a melt but does not contact a crystal. Linares also teaches a molten support material made of graphite is electrically connected as a cathode (col 2, ln 40-60; col 4, ln 15-40). Linares also teaches applying a voltage between the cathode and anode to suppress impurity incorporation into the melt (col 4, ln 30-65).

It would have been obvious to a person of ordinary skill in the art at the time of the invention to modify Tomzig et al by incorporating an anode and cathode electrodes, as taught by Linares, to suppress impurity incorporation into a melt used for crystal growth.

The combination of Tomzig et al and Linares does teach the intended use of the means for applying voltage across the electrode, however a recitation of the intended use of the claimed invention must result in a structural difference between the claimed invention and the prior art in order to patentably distinguish the claimed invention from the prior art. If the prior art structure is capable of performing the intended use, then it meets the claim. Here, the combination of Tomzig et al and Linares teaches the electrodes and a voltage means, thus is capable of the intended use of providing a radial electric current.

The combination of Tomzig et al and Linares does not teach the intended use of the means for applying voltage to impose magnetic field lines in the melt such that the flow of the radial current crosses the magnetic field lines to impart a stirring force, however a recitation of the intended use of the claimed invention must result in a structural difference between the claimed invention and the prior art in order to patentably distinguish the claimed invention from the prior art. If the prior art structure is capable of performing the intended use, then it meets the claim. Here, the combination of Tomzig et al and Linares teaches an induction coil for applying a magnetic field and a voltage means, thus is capable of the intended use of providing magnetic field lines that cross radial electric current to impart a stirring force.

The recitation “an apparatus for bottom seeding crystal growth” has not been given patentable weight because the recitation occurs in the preamble. A preamble is generally not accorded any patentable weight where it merely recites the purpose of a process or the intended use of a structure, and where the body of the claim does not depend on the preamble for completeness but, instead, the process steps or structural limitations are able to stand alone. See *In re Hirao*, 535 F.2d 67, 190 USPQ 15 (CCPA 1976) and *Kropa v. Robie*, 187 F.2d 150, 152,

88 USPQ 478, 481 (CCPA 1951). The preamble merely states the intended use of the structure, thus is not given patentable weight because all of the body limitations do not depend on the preamble for completeness.

Referring to claim 12, the combination of Tomzig et al and Linares teaches the crucible serves as the electrode.

Referring to claim 13, the combination of Tomzig et al and Linares teaches an induction coil, which is capable of the intended use of heating.

Response to Arguments

4. Applicant's arguments, see the amendment, filed 9/27/2007, with respect to the rejection(s) of claim(s) 11-15 under 35 U.S.C. 103 have been fully considered and are persuasive. Therefore, the rejection has been withdrawn because the prior art does not teach a graphite crucible. However, upon further consideration, a new ground(s) of rejection is made in view of Tomzig et al and Linares.

5. Applicant's arguments with respect to claims 11-13 have been considered but are moot in view of the new ground(s) of rejection.

Allowable Subject Matter

6. Claim 14-15 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

7. The following is a statement of reasons for the indication of allowable subject matter: The closest prior art is Linares (US 3,899,304) and Watanabe et al (US 6,077,346). Linares and Watanabe et al both teach an electrode is immersed in a semiconductor melt. Linares nor Watanabe et al teach, suggest or provide any rationale for mounting the electrode in a heater housing having an inside heater, a means for lowering the housing so its sits on a charge in a lower portion of the vessel, and a means for activating the heater.

Conclusion

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Matthew J. Song whose telephone number is 571-272-1468. The examiner can normally be reached on M-F 9:00-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Barr can be reached on 571-272-1414. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
